LATE 19TH CENTURY

SIZE: 2CMLONG - ¾ INS LONG (MIN) / 17CMLONG – 6¾ INS LONG (MAX)

LITERATURE

THE FISHHOOK IS AN ANCIENT FORM OF HUNTING FOR FOOD. FISHHOOKS OF FLAKED STONE HAVE BEEN FOUND DATING
FROM NEOLITHIC TIMES AND FISHING IS STILL OF ENORMOUS IMPORTANCE AS A FUNDAMENTAL SOURCE OF PROTEIN TO
MANY OF THE PEOPLE'S OF THE PACIFIC ISLANDS.

FISHHOOKS BESIDES BEING BARBED AND BAITED ALSO CARRIED BRIGHTLY COLOURED BEADS OR OTHER MATERIALS,
WHICH REVOLVING IN THE WATER SIMULATE A SMALL FISH AND ACT LIKE AN ARTIFICIAL SPINNER TO BAIT AND HOOK A
LARGER FISH.

CONSIDERING THAT NONE OF THESE SIXTEEN HOOKS ARE MADE OF ANY FORM OF METAL, AND WERE CONSTRUCTED
WITH TOOLS OF STONE AND SHARKS TEETH AND THEN TIED WITH SPECIALLY PREPARED FIBRE, THEY ARE A TRIUMPH OF
STONE AGE TECHNOLOGY.
