BRITISH NEOLITHIC STONE SPHERE OR BALL

A NORTHERN BRITISH NEOLITHIC STONE SPHERE OR BALL DIVDED INTO SIX SECTIONS
SMOOTH PATINATED SURFACE SOME SMALL DAMAGES

3000 – 2500 BC

SIZE: APPROX: 8CM DIA - 3 INS DIA

LITERATURE

ABOUT 400 OF THESE UNUSUALLY SHAPED SCOTTISH STONE BALLS HAVE BEEN FOUND WITH A PARTICULAR CONCENTRATION OF FINDS WITHIN A 500 MILE RADIUS OF ABERDEEN-SHIRE. THEY ARE NEARLY ALL THREE INCHES IN DIAMETER, BUT ARE MADE FROM A VARIETY OF DIFFERENT STONE MATERIAL. SOME HAVE A REGULAR PATTERN OF CARVED KNOBS, OTHERS AN IRREGULAR ONE, AND THE SIZE OF THE CARVED KNOBS VARIES. IT HAS BEEN SUGGESTED THAT THESE RATHER ENIGMATIC STONE BALLS WERE AN EXPERIMENTATION WITH SOLID GEOMETRY CARRIED OUT BY THE EARLY PICTS. THEIR FORM AND SHAPE RELATING TO PLATONIC SOLIDS SOME 2000 YEARS EARLIER THAN WHEN PLATO DESCRIBED THEM IN 'TIMAEUS' IN 360BC. WHATEVER THEIR ORIGINAL FUNCTION AND SYMBOLISM, TODAY THEY HAVE THE APPEARANCE OF A CONTEMPORARY WORK OF ART.
