LITERATURE

STEREOGRAPHIC PHOTOGRAPHY ENJOYED GREAT POPULARITY IN MID 19TH CENTURY FRANCE. THEORIES WHICH COMPARED LENSES TO THE HUMAN EYE LED TO THE INVENTION OF STEREOGRAPHY; A SIMPLE DEVICE FOR TAKING PICTURES WITH TWO LENSES AND FOR VIEWING THEM WITH TWO EYE PIECES, THEREBY CREATING AN ILLUSION OF DEPTH. IT BECAME A FEATURE OF FRENCH MIDDLE CLASS DRAWING ROOMS DURING THE SECOND EMPIRE AND WENT ON ENLIVENING LONG EVENINGS UNTIL THE END OF THE CENTURY. STEREOGRAPHY OPENED PEOPLES MINDS TO A FULLER, MORE ACCURATE KNOWLEDGE OF THE WORLD WHICH WAS DESTINED TO SYSTEMATIC PHOTOGRAPHIC COVERAGE.

THE STEREOGRAPHIC EFFECT IS PRODUCED BY TWO SLIGHTLY DISSIMILAR PHOTOGRAPHS TAKEN FROM VIEW POINTS 10CM TO 20CM APART. THE ILLUSION OF DEPTH DOES NOT APPEAR WITHOUT THE ADDITION OF A BINOCULAR VIEWING DEVICE. STEREOSCOPE IN HAND, THE SPECTATOR IS CUT OFF FROM THE WORLD IN THEIR OWN SILENT THEATRE IN FRONT OF A STAGE THAT RECONSTITUTES THE DIMENSIONS OF THE REAL WORLD. IT IS HARD TO IMAGINE THE FASCINATION WITH WHICH STEREOGRAPHY GRIPPED THE 19TH CENTURY VIEWER, BUT EVEN IN TODAY'S IMAGE SATURATED CULTURE THE EFFECT IS STILL SURPRISING AND QUITE MAGICAL.
